ABSTRACTED-PUB-NO: JP 2000354490 A

BASIC-ABSTRACT:

NOVELTY - Signal peptides for expression and secretion of a protein in chlorella are new.

DESCRIPTION - Peptide sequences of formula Met-Ala-Asn-Lys-X1-(Leu)n-X2-Ala-Ser-Gly (I).

X1 = Ser or Leu;

n = an integer of 5-15;

X2 = Gly-Ser-Leu or Pro-Leu-Ala.

INDEPENDENT CLAIM is also included for:

(1) one of two polypeptides of 16 nucleotides described in the specification;

(2) DNA encoding the polypeptide of (1); and

(3) a recombinant vector containing the DNA of (2);

USE - Preparation of human growth hormone and transformed chlorella.

ADVANTAGE - Signal peptides, DNA encoding for the peptides, gene expression cassettes, recombinant vectors having the cassettes, and

transformants having the vectors are provided.

ABSTRACTED-PUB-NO: JP 2000354490 A
EQUIVALENT-ABSTRACTS:

BIOTECHNOLOGY

Preferred DNA: The DNA may optionally further bound to a promoter, particularly cauliflower mosaic virus 35S promoter and/or ribulose diphosphate carboxylase S2 promoter, to give a gene expression cassette.

The following examples were carried out: (1) construction of expression cassette by 1) synthesis of DNA, 2) preparation of the promoter, and aimed expression gene, 3) construction of the expression vector, 4) preparation of the transformant by preparation of host *Chlorella sorokiniana* ATCC 22517 or *Chlorella vulgaris* C-27 and introduction of an expression recombinant vector and 5) expression of the protein.

TITLE-TERMS: NEW SIGNAL USEFUL PREPARATION HUMAN GROWTH HORMONE
TRANSFORM CHLORELLA
